DIAGNOSTIC REPORT

Name: Test Student

Target: JEE 2027

JEEsociety Score: 48

JEEsociety Score (Readiness Index):

48 /100

Full Readiness Gap:

You're **52** points away!

JEESOCIETY

since
2023

RANK DEGRADATION WARNING

At an estimated **0.6 effective hours/day**, you're running **5.4h/day below** the pace top scorers typically sustain. That's a small daily gap, but it compounds fast, most students who close it start seeing movement within 2-3 weeks of fixing just this one pattern.

You (effective)

0.6h/day

Topper Benchmark

6h/day

Founder's Note

You have immense potential. but potential grows only in the right environment.

Remember, This exam matters because it opens doors to colleges that shape how you think, who you become, and the standards you live by for the next four years.

If you take this phase seriously, those four years can give you clarity, confidence, and direction that compound for the next forty years.

This report is not about fear or pressure. It is about telling you everything - very honestly. So, use this wisely.

Sreyash Gupta

PHYSICS DEEP DIVE

Where You Stand: Physics

Peer Position

If your total score ties with another aspirant's, NTA checks Maths first, then **Physics second**. Physics is your tie-break safety net, worth strengthening even beyond what your total score alone suggests.

You don't need to master Physics. Moving from your current estimated **28 marks** to just **50 marks** (roughly 6 more correct questions) would meaningfully change your competitive position, especially given how tie-breaks work.

Funny thing, I had a student last year who thought he "just wasn't a Physics person." He was scoring under 20/100, convinced it was a talent problem. We checked his basics instead: Vectors, Units and Dimensions, Kinematics, all shaky. We stopped him from touching Modern Physics or Electrostatics entirely for 3 weeks, pure NCERT-level basics, nothing else. When he came back to the harder chapters, they suddenly made sense. He jumped to 44/100 in the very next mock.

Lesson for you: You're not bad at Physics, you're missing the foundation Physics is built on. Go back to Vectors and Kinematics before anything else.

YERKES-DODSON CURVE

CHEMISTRY DEEP DIVE

Where You Stand: Chemistry

Peer Position

Chemistry is checked last in NTA's tie-break order (after Maths, then Physics), but with lakhs of aspirants landing on similar totals, even a "last resort" tie-breaker resolves real ranks every single year.

You don't need to master Chemistry. Moving from your current estimated **45 marks** to just **65 marks** (roughly 5 more correct questions) would meaningfully change your competitive position, especially given how tie-breaks work.

I remember one student telling me Chemistry felt like it kept slipping through his fingers. He could recall every reaction perfectly the day after studying it, and completely forget it three days later. His Chemistry score swung between 25 and 60 depending on how recently he'd revised. We put him on a strict cycle: revisit every topic on Day 1, Day 3, and Day 7 after first studying it, no exceptions. Six weeks later his lowest Chemistry mock score was 55, and it stopped swinging.

Lesson for you: Your problem isn't understanding, it's retention. Fixed-interval revision (Day 1, 3, 7) matters more than how many new topics you cover.

MATHS DEEP DIVE

Where You Stand: Maths

Peer Position

We noticed your Chemistry standing is significantly higher than your Maths. You may be trying to compensate by pushing Chemistry harder, here's the math on why that strategy doesn't fully work: even a strong Chemistry score can't offset a 22-mark gap in Maths, because your overall rank is driven by the total across all three subjects, not any single one.

Because thousands of aspirants land on near-identical total scores every year, ties are common. When they happen, NTA resolves them using **Maths score first**, before Physics or Chemistry are even considered. A weak Maths score doesn't just cost you marks directly, it also puts you at a real disadvantage against equally-scored peers when final ranks get assigned.

You don't need to master Maths. Moving from your current estimated **15 marks** to just **35 marks** (roughly 5 more correct questions) would meaningfully change your competitive position, especially given how tie-breaks work.

You know what, one student of ours was in your exact spot. Maths felt impossible, he'd scored 12/100 for two straight mocks and was ready to write it off completely. We didn't ask him to love Maths. We asked him to master exactly 4 chapters, Quadratic Equations, Sets & Relations, Statistics, and Straight Lines, the most formula-based, least "clever-thinking-required" chapters in the syllabus. Six weeks later his Maths score was 46/100. His overall percentile jumped more from that than from anything he did in Physics or Chemistry that term.

Lesson for you: Stop trying to complete the full Maths syllabus. Target the 4 chapters above first, they reward formula-memorization, not "genius," and they're worth real marks.

R.E.F. ANALYSIS

A big part of your final result is dependent on these 3 unspoken factors. Read them. Understand them.
Execute them.

This is a discipline issue, not a knowledge issue, and it's exactly the kind of pattern a mentor spots before you do, because you can't see your own blind spots from inside them.

BIGGEST BARRIER & MINDSET

Do you truly believe that "I am the BEST"?

Barrier notes...

Be honest, not hopeful

EXECUTION PLAN

NOTE: The entire report was generated and your profile was compared with the past data of top AIR's.
If you take these 7 advices seriously you will get closer and closer to your projected trajectory

- 1.** Stay consistent and review your error log daily.
- 2.** Stay consistent and review your error log daily.
- 3.** Stay consistent and review your error log daily.
- 4.** Stay consistent and review your error log daily.
- 5.** Stay consistent and review your error log daily.
- 6.** Stay consistent and review your error log daily.
- 7.** Stay consistent and review your error log daily.
- 8.** Share this exact list with your mentor and ask them to check in on it in 7 days.
Accountability from someone outside your own head changes follow-through more than willpower does.

JEEsociety

2027

Let's Get 99%ile

SREYASH GUPTA
IIT BOMBAY

PHYSICS

- **Laws of Motion**
- **Work, Energy & Power**
- **Rotational Motion**
- **Electrostatics**
- **Current Electricity**
- **Optics & Wave Optics**
- **Modern Physics**
- **Thermodynamics**
- **Units & Measurements**
- **Kinematics**

To reach a 99 percentile, you generally need to score about 60 marks in each subject. The chapters listed above carry high weightage and are sufficient to score 60+ marks in any JEE Main paper.

Aim to complete as many of them as possible.

$$(\sqrt[n]{a})^m = \sqrt[n]{a^m} = a^{\frac{m}{n}}$$

NOTE TO PARENTS

If you are reading this, it already tells me something important about you.

It tells me that you care, not just about marks, but about your child's future.

Let me tell you,
Your child is trying, even on days when progress is not visible.

JEE preparation has ups and downs, and a few bad tests do not define your child's future.

I have personally seen many students who struggled initially, but with the right environment and belief from their parents, they are now studying in IITs and their dream colleges.
What helps students most is calm support, regular routine, and trust from home.

The biggest shift I've seen isn't more hours, it's a student having one person, outside the pressure of home, who checks in on them weekly without judgment.

Please focus on their sleep, food, health, and a few peaceful study hours every day.

Thanks for trusting JEEsociety ❤️

CONCLUSION

Now you know what exactly you are doing wrong. Don't become like the mass. Please go and EXECUTE them.

Final Verdict

Focus on your barriers and execute the plan consistently.

A Printable 90-Day Habit Grid

MOCK TEST TRACKER

Name: Test Student Target: 2027

NOTE: This tracker gives you a chance to be completely honest with yourself. Every score you log on this grid maps your overall progress and takes you closer to the rank you dreamt of when you started your JEE journey.

Test	Score	Physics	Chemistry	Maths	Time left	Negative Marks
Mock 1						
Mock 2						
Mock 3						
Mock 4						
Mock 5						
Mock 6						
Mock 7						
Mock 8						
Mock 9						
Mock 10						
Mock 11						
Mock 12						
Mock 13						
Mock 14						
Mock 15						

Review this sheet with your mentor after every mock.
Patterns you can't see, they usually can.

At least spend 30 mins on analysis but not more than 2hrs

MOCK ANALYSIS GUIDE

Name: Test Student

Mock Number: _____

Date: _____

Total Score: ____ / 300

A quick summary of exactly what happened during the 3 hours.

Subject	Total Attempted	Correct (+4)	Incorrect (-1)	Unanswered (0)	Net Score
Physics					
Chemistry					
Math					
TOTAL					

Overall Accuracy: (Correct / Total Attempted) * 100 = ____%
(Note: If this is below 80%, negative marking is silently destroying your rank!)

The Action Board (Topic Tracking)

Column A: The "Danger Zone" (Studied but Unattempted/Incorrect)
These are topics you spent hours studying, but still couldn't solve in the exam. This means your revision was passive or incomplete.

Column B: The "Skill Gap" (Unattempted due to lack of knowledge)
Questions you left completely blank because you haven't covered the chapter or forgot the formula.

Before my next mock on [Date: _____], I promise to:

- Resolve: Re-solve every single incorrect and unattempted(studied) question from this mock without looking at the solutions first.
- Fix: Complete 30 fresh questions specifically at least from my top 4 "Danger Zone" topics.

How to use this effectively:

- The 24-Hour Rule: Fill this out within 24 hours of finishing the mock, while the memory of why you guessed an answer is still fresh.
- Focus on the "Danger Zone": Fixing a topic you've already studied (Column A) takes less time and yields a higher ROI than starting a completely new, difficult chapter from scratch.

Signature: _____ (Sign it to make it a contract with yourself)

The Root Cause Matrix (Why did I lose marks?)

Tally your incorrect questions here:

⚠ Silly/Calculation Error: ____

(I knew the concept perfectly, but messed up a sign, unit, or basic math. Very frustrating, but highly fixable.)

💡 Conceptual Flaw: ____

(I thought I knew the formula/concept, but applied it wrong or got trapped by the examiner.)

🤔 Wild Guessing: ____

(I took a blind shot to increase attempts and paid the price. Need to stop doing this.)

⏰ Time Crunch / Panic: ____

(I knew how to solve it, but ran out of time or panicked and marked the wrong option.)

SUNDAY REFLECTION

JEE SOCIETY

5 minutes now saves you from repeating the same week 12 times.

Name: _____

Week of: _____ to _____

How to use:

Every Sunday, before planning next week, spend 5 quiet minutes answering this honestly. This is your weekly course-correction, not a guilt session.

What worked this week?

What didn't work / where did I lose time?

Biggest distraction of the week:

One thing I'll do differently next week:

Topics I'm still weak in:

This week, I'd rate my discipline:

1

-

2

-

3

-

4

-

5

Next Sunday's date: _____ (write it now so you actually come back)

Small corrections, every week, compound. - JEEsociety
